User	
is able to perform CRUD operations on Posts Can determine if a the user is a admin determine his userId Keeps track of the users data create a new user login a user	Post Vote

Post	
Knows it's owner, number of votes, category Displays the Post in a appropraite way	User Board

We think a concept without any responsibilities is not really a working concept, due to the fact that the ides is thaat responsiblities should be distributed among different parts and if a part so a concept does not have any responsibilities it is not needed in the project.
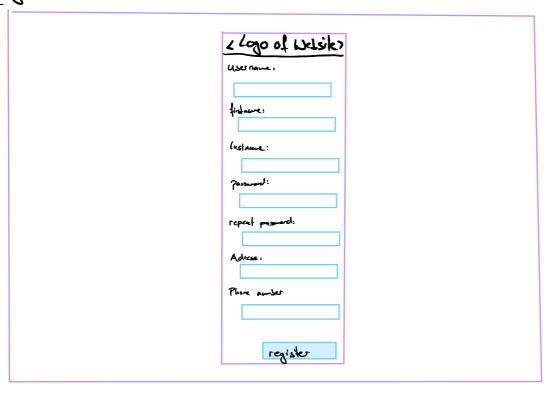

(I left the toDo list out of this exercise because it does not have anything to fo with the project in the end)
